The availability of mental health services for people with serious and persistent mental illness is a critical issue for Australian health care. To systematically review the literature and propose a strategy for national policy initiatives to address the continuing controversy over the need for and funding of mental health services. We systematically reviewed the published scientific literature and considered information held in government and non-

government records. In 2006, we reviewed 97 peer-reviewed, published scientific papers relevant to the Australian health care system for services for people with serious and persistent mental illness. These were extracted and re-presented using a narrative, descriptive approach. We were also provided with key document data from the National Mental Health Commission, Department of Health and Ageing and Australian Institute of Health and Welfare. We found adequate evidence of continuing controversy over the need for and funding of mental health services for people with serious and persistent mental illness. Many governments have invested in developing mental health policy, including the mental health system and delivery models. The Australian government's Medicare-funded mental health system has faced controversy. The Australian Institute of Health and Welfare's National Mental Health Survey reported that the number of people receiving mental health services increased between 1997 and 2002 and fewer people reported a mental health problem. However, several problems were identified in the Australian mental health system, including the lack of a standardised classification system and the absence of comprehensive service plans. The major theme was the existence of persistent inequity, both between and within areas of the country, that led to the ongoing controversy. To address these gaps, we propose a strategy for strengthening Australia's mental health policy. Many countries across the globe are considering and implementing policy initiatives for mental health. Only Australia has had ongoing and significant public debate. We recommend this debate be directed towards providing better services and access for people with serious and persistent mental illness. This paper provides a useful foundation for mental health policy development in Australia. The effects of the spherical multi-layer f678ea9f9e
